What is The Turkish-Kurdish Event Database ?

The Turkish-Kurdish Event Database is an agnostic archive of the human rights abuses committed in Anatolia by any group or agent.

The documentation will present to you the first version of a paper written by Dr. Demet Mousseau and Justin Napolitano, both of the University of Central Florida.

It was presented at the Hague in 2019 at *The Peace Economics Conference*.

A follow up is currently in production which will migrate the data to a Graph DB that strictly adheres to the person, object, location, event (POLE) schema. It will also implement an NLP algorithm to parse event data in real time.

INTRODUCTION

Overview

This Section introduces the background of the Kurdish-Turkish Conflict and describes the intent of the research.

Date Oct 20, 2021

 - * *Scope*
 - * *Coding Procedure*

1.1 The Kurdish Issue

The Kurdish issue has affected the Turkish state since the establishment of the Kurdistan Workers' Party (PKK) in the late 1970's. Fighting for autonomy, the PKK has been the source of violence in southeastern Turkey, as terroristic events have taken the lives of countless Turkish civilians. The PKK has committed a range of human rights violations, including the utilization of child soldiers and the establishment of a comprehensive human trafficking network. The victims of these actions are not exclusively Turkish; in addition to these crimes leaking into the neighboring Syria and Iraq, PKK criminal activity has stretched into Europe, including Romania and Italy. In short, the PKK's actions have been broad and destructive.

1.2 The Turkish Issue

The Turkish state is not only a target, but also victim of the conflict. Despite being signatories to several human rights agreements – including the United Nations Declaration of Human Rights – Turkey has passed controversial government orders to restrict the basic rights of their Kurdish population. These include, but are not limited to, the manipulation of local elections, the implementation of state guards, and curfews in primarily Kurdish areas. As a consequence of the fighting between the two groups, human rights violations have been plentiful. Innocent civilians of all ethnicities are the true victims.

1.3 Intent of Research

The primary intent of our research is to provide evidence of the social impact of the ongoing Kurdish national movement. A special emphasis is placed upon events relating to women and to children. Secondly, we strive to capture the human rights abuses committed by all parties involved.

1.4 The Data

1.4.1 Scope

The Turkish-Kurdish Database contains information on protests, riots, strikes, etc... in Turkey with regard to Kurdish national and political movements. There is no one Kurdish political party, nor is there one military arm. Thus, the objective of this dataset is to capture all events with respect to Kurdish action within the state of Turkey.

We do acknowledge that Kurdish factions within Turkey do not limit their range of action to the borders of the state. Thus, international events that can be directly tied to a Kurdish organization based within the state of Turkey will also be captured in this dataset.

1.4.2 Coding Procedure

Our coding procedures adopt the coding methodology of selected variables from the UCDP/Prio conflict dataset to maximize interoperability. Each variable selected from the dataset are labeled with a UCDP tag. As such, we have recoded a number of variables found in the UCDP/Prio Dataset to fit the methodology of our research.

We further enhance the dataset by adding a human rights component to record violations according to international treaties. These are reflected by the `human_rights_1` and `human_rights_2` variables. As we chose to focus on women and children dichotomous variables have been added to designate whether any given event affects women and another to designate the same for children. Also, variables have been added to account for deaths of women and of children.

EVENT QUERY PROCEDURE

Overview

This section explains the search procedures used to query the Lexis-Nexis database. It can be used by research assistants to code events.

Date Oct 20, 2021

Author Justin Napolitano

Chapter Contents

- *Event Query Procedure*
 - *Primary Search Procedure*
 - *Query Result Sorting Procedure*

2.1 Primary Search Procedure

1. Paste the following into the search bar on the Nexis Uni home page:
 - hlead(turkey) and women or rape or slavery or sexual or trafficking or child labor or child soldier or children or violence and publication(Agence France Presse - English or associated press international)
2. Select the filter results drop down menu.
3. Select appropriate date ranges

2.2 Query Result Sorting Procedure

1. Begin with the oldest listed resulted. Then proceed chronologically. For each story, determine if the information is relevant to the data project. If not, discard the story.
2. During periods of civil conflict, defined by the start and end dates in the Uppsala Armed Conflict Database, code violent events associated with the civil conflicts.
3. Group duplicate articles together as a single event. In the case of disputed information, cite the most common estimates, and/or the most recently cited.

4. In the case that one article covers multiple events determine if the main actor(s), target(s), and issue(s) are different, and if so, code these as distinct events.
5. Code a new event if the actor(s), target(s), and issue(s) are different or if there is substantial time that elapses between one event and another. If the actors, targets, and issues are the same, but there is a brief lull in activity, code it as the same event, so long as there is significant “momentum” linking the time periods.

DATABASE SCHEMA

Overview

This section documents the schema of the DB.

You will find the *Schema Definitions* and the *Reference Tables* below.

Date Oct 20, 2021

Author Justin Napolitano

Contents

- *Database Schema*
 - *Schema Definitions*
 - *Reference Tables*

3.1 Schema Definitions

Overview

This section contains the definitions and descriptions for every variable recorded in the data set.

Date Oct 20, 2021

Author Justin Napolitano

3.1.1 Year

Definition

Records the Year an event occurs.

Data Type

Integer.

Reference Table

Overview Table.

3.1.2 Aggressor_ID

Definition

Records the ID of the aggressor of an event; the agent or group that commits a human right violation.

Data Type

Categorical Integer.

Reference Table

Aggressor Table .

3.1.3 Aggressor_Name

Definition

Records the name of the aggressor of an event; the agent or group that commits a human right violation.

Data Type

String.

Reference Table

Aggressor Table.

3.1.4 Victim_ID

Definition

Records the ID of the victim of an event; the agent or group that is victim to a human right violation committed by the aggressor.

Data Type

Categorical integer.

Reference Table

Victim Table.

3.1.5 Victim_Name

Definition

Records the name of the victim of an event; the agent or group that is victim to a human right violation committed by the aggressor.

Data Type

String.

Reference Table

Victim Table.

3.1.6 Source_Article

Definition

A record of the name, data, and title of the source from which information on an event is gathered.

Data Type

String.

Reference Table

Overview Table.

3.1.7 Source_Date

Definition

The date the source material containing the information of an event record.

Data Type

DateTime.

Reference Table

Overview Table.

3.1.8 Source_Headline

Definition

The title of the source material containing the information of an event record.

Data Type

String.

Reference Table

Overview Table.

3.1.9 Region_Name

Defintion

The name of the administrative region an event was recorded. Regions are defined according the offical provincial and administrative regions of the Turkish State.

Data Type

String.

Reference Table

Region Table.

3.1.10 Region_Code

Definition

The code of the administrative region an event was recorded. Regions are defined according the official provincial and administrative regions of the Turkish State.

Data Type

Categorical Integer.

Reference Table

Region Table.

3.1.11 Kurdish_Region

Definition

A boolean variable that indicates whether a region is predominantly Kurdish by population.

Data Type

Boolean.

Reference Table

Overview Table.

3.1.12 Province_Name

Definition

The name of the provincial level administrative region an event was recorded. Provinces are defined according the official provincial and administrative regions of the Turkish State.

Data Type

String.

Reference Table

Province Table.

3.1.13 Province_Code

Definition

The code of the provincial level administrative region an event was recorded. Provinces are defined according the official provincial and administrative regions of the Turkish State.

Data Type

Categorical Integer.

Reference Table

Province Table.

3.1.14 Country

Definition

The state (country) where an event is recorded.

Data Type

Integer.

Reference Table

Overview Table.

3.1.15 Date_Start

Definition

A record of the day, month, and year in the DD/MM/YYYY format of when an event takes starts.

If the exact datastamp cannot be determined the best possible date is estimated.

Data Type

DateStamp DD/MM/YYYY.

Reference Table

Overview Table.

3.1.16 Date_End

Definition

A record of the day, month, and year in the DD/MM/YYYY format of when an event ends.

Data Type

DateStamp DD/MM/YYYY.

Reference Table

Overview Table.

3.1.17 Women_Killed

Definition

The best estimate of deaths of women recorded for an event.

Data Type

Integer.

Reference Table

Overview Table.

3.1.18 Children_Killed

Definition

The best estimate of the number of deaths of children recorded for an event.

Data Type

Integer.

Reference Table

Overview Table.

3.1.19 Total_Killed

Definition

The sum of Women_Killed, Children_Killed, and any other deaths recorded for an event.

Data Type

Integer.

Reference Table

Overview Table.

3.1.20 Women_Raped

Definition

The recorded number of women during an event.

Data Type

Integer.

Reference Table

Overview Table.

3.1.21 Illegal_Arrests

Definition

The recorded number of people illegally arrested during an event.

Data Type

Integer.

Reference Table

Overview Table.

3.1.22 Illegal_Detentions

Definition

The recorded number of people illegally detained by any non-governmental agent or organization during an event.

Data Type

Integer

Reference Table

Overview Table.

3.1.23 Illegal_Imprisonments

Definition

The recorded number of people illegally imprisoned by the Turkish State during an event.

Data Type

Integer.

Reference Table

Overview Table

3.1.24 Human_Rights_Category_Code

Definition

The code of the category of Human Rights violation as defined by Justin Napolitano and Demet Mousseau.
Insert a reference here.

Data Type

Categorical Integer.

Reference Table

Human Rights Category Table.

3.1.25 Human_Rights_Category_Name

Definition

The name of the category of Human Rights violation as defined by Justin Napolitano and Demet Mousseau.
Insert a reference here.

Data Type

String.

Reference Table

Human Rights Category Table

3.1.26 Human_Rights_Offense_Code

Definition

The code of the offence to Human Rights as defined by the United Nations or Comparable International Treaty Organization.

Data Type

Categorical Integer.

Reference Table

Human Rights Offense Table.

3.1.27 Human_Rights_Offense_Name

Definition

The name of the offence to Human Rights as defined by the United Nations or Comparable International Treaty Organization.

Data Type

String.

Reference Table

Human Rights Offense Table

3.1.28 Is_Women_Event

Definition

A boolean variable that designates if an event primarily affects males or females.

0 designates an event as affecting males.

1 designates an event as affecting women.

Data Type

Boolean.

Reference Table

Overview Table.

3.1.29 Is_Children_Event

Definition

A boolean variable that designates if an event primarily affects adults or children.

0 designates an event as affecting adults.

1 designates an event as affecting children.

Data Type

Boolean.

Reference Table

Overview Table

3.1.30 Description

Definition

A description of an event that may contain information that could not be relayed in the coding.

Data Type

String.

Reference Table

Overview Table.

3.1.31 ID

Definition

A unique identifier for a coded event

It is constructed by appending the values of:

1. year
2. Aggressor_ID
3. Victim_ID
4. Human_Rights_Category_Code
5. Human_Rights_Offense_Code

For instance, id 19981265 is an event that occurred in 1998 committed by the Turkish government against women. It is a broad violation of Collective Developmental rights. Specifically, the right to freedom of peaceful assembly and association

Data Type

String.

Reference Table

Overview Table.

3.2 Reference Tables

Overview

This section contains reference tables for variables coded numerically in the Turkish-Kurdish Conflict Event Database

Date Oct 20, 2021

Author Justin Napolitano

- *Overview Table*
- *Aggressor Table*
- *Victim Table*
- *Human Rights Category Table*
- *Human Rights Offense Table*
- *Region Table*
- *Province Table*

3.2.1 Overview Table

Table 1: Overview Table

Variable Name	Description	Data Type
<i>Year</i>	Records the year of the event.	Integer
<i>Aggressor_Id</i>	The unique identifier of the aggressor in an event.	Categorical Integer
<i>Aggressor_Name</i>	The name of the aggressor in an event.	String
<i>Victim_ID</i>	The unique identifier of the Victim of an event.	Categorical Integer
<i>Victim_Name</i>	The class of the victim an event.	String
<i>Source_Article</i>	Reference to the names, dates, and titles of the source material from which information on the event is gathered	String
<i>Source_Date</i>	The date the source material was published.	DateString: DD/MM/YYYY
<i>Source_Headline</i>	The titles of the source materials.	String
<i>Region_Name</i>	The name of the Turkish region in which an event took place.	String
<i>Kurdish_Region</i>	Designates whether a region contains a sizable Kurdish population.	Boolean
<i>Region_Code</i>	Region in Turkey where the event took place.	Categorical Integer
<i>Province_Name</i>	The name of the Turkish Province in which an event took place.	String
<i>Province_Code</i>	Province in which the event in the event occurred.	Categorical Integer
<i>Country</i>	The state (country) where the event took place.	String

continues on next page

Table 1 – continued from previous page

Variable Name	Description	Data Type
<i>Date_Start</i>	Lists the day, month, and year in DD/MM/YYYY format for when the event begins. If the exact day cannot be identified, this is the best approximation of the start date.	String
<i>Date_End</i>	Lists the day, month, and year in DD/MM/YYYY format for when the event ends. If the exact day cannot be identified, this is the best approximation of the start date.	String
<i>Women_Killed</i>	The best estimate of deaths of women.	Integer
<i>Children_Killed</i>	The best estimate of deaths of children.	Integer
<i>Total_Killed</i>	Always the sum of the <i>Women_Killed</i> and <i>Children_Killed</i> .	Integer
<i>Women_Raped</i>	The number of women raped in a event.	Integer
<i>Illegal Imprisonments</i>	The number of people illegally imprisoned by the Turkish Government.	Integer
<i>Illegal Arrests</i>	The number of illegal arrests committed by the Turkish Government in a single event.	Integer
<i>Illegal Detentions</i>	The number of illegal detentions committed by the PKK or non-governmental organization in a single event.	Integer
<i>Human_Rights_Category_Code</i>	Overarching human rights violation. See table 2.	Categorical Integer
<i>Human_Rights_Category_Name</i>	Overarching human rights violation. See table 2.	String
<i>Human_Rights_Offense_Code</i>	Subcategory of human rights violation. See table 2	Categorical Integer
<i>Human_Rights_Offense_Name</i>	Subcategory of human rights violation. See table 2	String
<i>Is_Women_Event</i>		Boolean
<i>Is_Children_Event</i>		Boolean
<i>Description</i>	A description of an event that may contain information that could not be relayed in the coding.	String
<i>ID</i>	A unique identifier for a coded event.	Integer
